PROJECTS

Data Privacy and Protection Framework (DPP) (In progress)

This framework outlines comprehensive policies, procedures, and technical measures to safeguard personal data, ensuring its confidentiality, integrity & availability. **Privacy by design** is the core of this framework, **which aims to reduce the risk of data breaches and ensuring the privacy rights of individuals are respected and upheld.**

SOC Automation

This project uses **Wazuh** for real-time threat detection, **Apache Hive** for in-depth data analysis and **Shuffle** for handling workflow automation, we streamline security processes and make threat management more responsive and efficient. Together, these tools create a smarter, more agile SOC that's better equipped to handle today's security challenges.

Privacy Policy Analyzer

Developed a Google Chrome extension utilizing LLAMA3 to analyze privacy policies and provide concise, user-friendly summaries in local languages. The tool enhances user awareness of data privacy, helping users make informed decisions while reducing privacy and legal risks.

RSA

Implemented and understood the **RSA encryption algorithm** , one of the first public-key cryptosystems, and explore its applications in securing digital communications.

EXPERIENCE

KPMG Assurance and Consulting LLP

Consultant | September 2022 – September 2023

Worked for Australian Global financial services group

- Collaborated with cybersecurity teams to design and enforce access controls, ensuring compliance with GDPR.
- Implemented continuous monitoring processes, integrating data governance and security metrics to track compliance and security posture.
- Successfully managed a GDPR compliance project, ensuring that both data governance and cybersecurity requirements were met, leading to zero compliance issues during audits.

Infosys Limited

Associate Consultant | January 2022 – August 2022

Worked for an American investment bank and financial services corporation

- Developed and implemented data governance frameworks, including data classification, data stewardship, and data quality standards.
- Implemented a data classification system that informed cybersecurity protocols, improving the organization's data protection strategy and reducing unauthorized access incidents by 30%.

Associate Business Analyst | September 2020 – December 2021

Worked for an American multinational corporation that operates in the food industry

- Led a cross-functional team to develop a comprehensive data governance framework that integrated cybersecurity measures, resulting in a 20% reduction in data breaches.
- Provided training to enhance organizational awareness and adherence on security practices.

Cognizant

Programmer Analyst Trainee | December 2016 – July 2018

- Technical knowledge on web applications and database technologies and considerable experience of development on Adobe Experience manager (AEM).
- Have strong experience on agile methodology and respective tools like, JIRA and Confluence.

EDUCATION

Concordia University, Montreal

MENG Information Systems Security
Sep 2023 – May 2025 (expected)
GPA – 3.58/4.33 (current)

Chandigarh Engineering College

Bachelor of Technology (IT)
Aug 2012 – Oct 2016
Marks – 72%

CERTIFICATIONS

ISC2 certified in cybersecurity

CompTIA Security+ SY-701

ISC2 CISSP (In preparation phase)

Collibra Ranger

COURSEWORK

Implementing NIST RMF (Udemy)

Try Hack Me SOC Level 1 (In progress)

Foundations of cryptography

Operating systems security

Malware and application defenses

Security evaluation methodologies

Computer networks & programming

Cloud computing

SKILLS

Scripting Languages

Java • Python • Groovy

Operating Systems

Linux (Kali) • Windows

Hard Skills

- Risk Management
- Data classification and protection
- Dynamic and Static Vulnerability analysis
- Network Security
- Data Governance
- Data quality and integrity
- Object Oriented Programming

Frameworks

NIST CSF • ISO 27001

Soft Skills

Team player • Bias for action
